

Leading Life Sciences Company Installs SafeMedia's Network Security Management Appliance to Prevent Illegal Peer to Peer (P2P) File Sharing.

"Adamis Laboratories is the perfect example of a corporation that chose to protect their employees, customers and confidential data from the risks associated with P2P digital piracy." Safwat Fahmy
SafeMedia Founder and CEO.

Boca Raton, Florida, April 7th, 2008, —Adamis Laboratories and SafeMedia announced today that Adamis has deployed SafeMedia's "Clouseau"™ network security management appliance. Clouseau™ is designed to monitor, detect, intercept, capture and actively deny all illegal file sharing from P2P networks, encrypted or non-encrypted, without invading the users' privacy.

"Clouseau™ will provide Adamis protection from inadvertent sharing of corporate data while stopping P2P delivered Malware, Trojans, Worms and Virus's", said Richard Aloï, President of Adamis Laboratories.

"P2P traffic was a concern for Adamis even though they have a firewall in place. Most P2P networks use standard web access and often use encryption to hide their illegal activities," said Bill Weiss, Vice President of Sales for SafeMedia.

"The scalability and flexibility of Clouseau offers the only available solution for Corporations to immediately deploy and "Actively Deny" all P2P file sharing on their networks," said Safwat Fahmy, CEO for SafeMedia. "Adamis is an excellent example of a well-advised Corporation that chose to protect its employees and customers while safeguarding all corporate data. Clouseau is a portable and scalable solution that could easily and immediately be deployed at homes, corporations, educational institutions, ISPs, and Government agencies," said Fahmy.
