

International Computer Staffing and Consulting Company selects SafeMedia's P2P Active Denial Appliance to secure its network against Inadvertent File Sharing

“SafeMedia’s system is like having an insurance policy against information theft though inadvertent files sharing created by P2P networks” said John Kemp, CEO Compustaff

Compustaff, Boca Raton, Florida, has selected SafeMedia's Active Denial P2P network security appliance to provide P2P network security for its consulting, outsourcing and recruitment business. SafeMedia "Clouseau", is a network security management appliance designed to monitor, detect, intercept, capture, report and actively deny all inadvertent file sharing from P2P networks, encrypted or non-encrypted, without invading the users' privacy.

Bill Weiss, V.P. Sales for SafeMedia summarized that Corporations face an increased security risk, when P2P networks create inadvertent file sharing. Theft of corporate propriety data, client records, and employee files can be quickly leaked onto the open "wild west" public Internet. Once these documents surface on a P2P network, they can never be recovered. Companies' can quickly lose competitive market advantage and suffer losses if inadvertent file sharing exposure exists.

Like many other companies, Compustaff relied on firewall technology to protect against internet intrusion. However Compustaff quickly noticed that firewalls failed to stop encrypted P2P. "We were impressed with the way SafeMedia could help us block P2P traffic that could not be blocked by firewalls or any other currently available solutions that we evaluated. Purchasing SafeMedia's system is like purchasing an insurance policy on our business" said John Kemp, CEO Compustaff.

"Our network policies prohibit our employees from using P2P, but enforcement was not practical. After deploying SafeMedia's technology, our network administrators get real-time visibility into P2P Internet traffic, allowing them to capture and block infringing P2P clients and effectively manage our company's policies", said John Kemp.

"The scalability, flexibility, and the advanced architecture and technologies embedded in Clouseau provide for customer investment protection in current and future network infrastructure and for the acceleration of system deployment to provide quickest time-to-value for the users" said Weiss.

About Compustaff

Compustaff is a privately owned computer consulting and staffing organization providing state-of-the-art technical consulting, outsourcing and recruitment services within specific disciplines across a wide spectrum of American industry and Government.
